

Cambium Networks

Department Description:

Cambium Networks Project Manager Job Description

Cambium Networks is a leading global provider of wireless broadband solutions that Connect the Unconnected – People, Places, and Things. Through its extensive portfolio of reliable, scalable, and secure Wi-Fi and fixed wireless broadband point-to-point (PTP) and point-to-multipoint (PMP) platforms, managed by cloud-based software, Cambium Networks makes it possible for service providers, enterprises, governmental and military agencies, oil & gas and utility companies, Internet service providers, and public safety networks to build powerful communications networks, reach users from 200 kilometers across mountain tops down to the last meter to their devices, and intelligently manage their infrastructure through end-to-end network visibility and actionable analytics. Headquartered in Rolling Meadows, IL, outside Chicago and with R&D centers in the US, England, and India, Cambium Networks sells through a range of trusted global distributors.

The successful candidate will lead a multi discipline team of engineers in the development of telecommunication equipment, for use and sale around the world. They will work within a dynamic organization, using leading edge technology, engineering methods and production facilities to help connect people, places and things. Based in our Rolling Meadows office, they will work within the develop team, with people based at 5 locations over 3 continents. They will work through the complete product lifecycle, from inception, through system design, development, test and into production. They will have responsibility for coordinating engineering support until end of products life. The chosen applicate may need to travel to meet with suppliers and sub contract manufactures as well as to work face to face with members of the team based in other locations.
